

The Original Allergy Emergency Kit™ 16 Unit Auto-injector Cabinet for School Nurses Offices

The number of students with food allergies is increasing dramatically! This cabinet is intended to be installed on the wall of the school nurse's office and holds up to 16 well organized Epinephrine Auto Injectors. This cabinet locks securely but can be accessed in an emergency by breaking the safety glass material with an attached hammer. Kit includes hammer/chain, installation anchors, evacuation tote bag, 3D signage to mount above the cabinet and both clear and privacy glass options.

- When paired with the Inhaler Cabinet you have a great side-by-side system for organizing your epinephrine auto injectors and asthma inhalers.
- This cabinet includes the Original Allergy Emergency Kit™ Labeling System for convenient auto-injector "photo" sleeves and MS Word template for child photo and allergy information. Sleeves are included for both single and double auto-injectors.
- A Velcro loop back panel provides maximum storage space and no worries if the designs or brands of the auto injectors change over time.
- In an evacuation scenario the back panel with all injectors can be removed and placed in the included bright red tote bag for easy carrying.

Dimensions: 17" x 17" x 4"
